

THC is CHANGING

Know the risks.

THC is the part of the cannabis plant that makes the user feel “high.”

Types of THC:

- **Delta 9** is a type of THC found in marijuana that has strong effects and causes the “high” that many people connect to marijuana.
- **Novel (new and emerging) THC:** Types of THC made from hemp plants. Manufacturers take the non-active cannabinoids (chemicals) from hemp, such as CBD, and change them to novel THC's, such as Delta 8 THC, Delta 10 THC, and others. Some THC products changed from hemp-based CBD are human-made and not found naturally. These THC's come in many different strengths and can cause the “high” people are familiar with. It's important to note these products are not currently monitored through the Food and Drug Administration (FDA) so we can never be sure of what is truly in these products.

**Start the conversation –
Talk to your kids about being THC free.**
